SUMMARY

Full stack developer at CS Soft Solutions, where I started as a trainee in June 2022 and have been on the team since. I build web platforms for clients in fintech, health tech, AI SaaS, logistics and government, mostly React and Next.js on the front end, Node, NestJS and AWS behind it.

EXPERIENCE

Full Stack Developer

December 2022 – present

CS Soft Solutions · Mohali, India

- Build end-to-end web applications for clients across fintech, health tech, AI marketing and the public sector, from requirements through to production release.
- Write component-driven front ends in React, Next.js, TypeScript and Redux Toolkit, with Tailwind and SCSS design systems that keep the UI consistent across products.
- Develop REST APIs and services in Node.js, NestJS and Express against MySQL, PostgreSQL and MongoDB.
- Implement serverless workflows on AWS Lambda and containerise services with Docker.
- Engineer role-based access control, authentication and audit logging for consoles handling financial, clinical and government data.
- Work in Agile sprints with distributed teams, reviewing code and writing the specifications that keep scope agreed.

Trainee Developer

June 2022 – December 2022

CS Soft Solutions · Mohali, India

- Six-month traineeship: learned the team's stack and review process, and shipped my first production features.
- Moved onto client delivery work at the end of it and joined the team permanently.

KEY PROJECTS

Fyntiq

Fintech www.fyntiq.com

Front end and transaction flows

A US financial platform with three connected products on one network: a consumer wallet for holding, sending and spending across borders, a business platform for invoicing and accounting, and pay-at-the-table for restaurants. I built responsive product interfaces and the secure transaction flows that run through them.

React · Next.js · TypeScript · Node.js · AWS

Addlly AI

AI SaaS addlly.ai

Application interface and API integrations

An enterprise AI marketing platform whose brand-trained agents create, optimise and audit content for visibility in ChatGPT, Perplexity and Google. I worked on the application interface and the API integrations behind one-click blog, social and newsletter generation.

React · Next.js · Node.js · REST APIs · LLM integrations

APMS Government

Secure administrative console

A platform for the Georgian Ministry of Environmental Protection and Agriculture that administers state agricultural support programmes end to end: applicant intake, beneficiary verification, document management, approval workflow and disbursement tracking. I delivered the administrative console, with multi-role permissions, a multilingual UI and exportable reporting for ministry staff.

React · Next.js · TypeScript · Node.js · PostgreSQL · AWS

M&ES Government

Indicator management and reporting

A planning, monitoring and evaluation platform for the same ministry, tracking programme indicators and results across national agriculture and rural-development strategies. I built the indicator-management, data-entry and reporting modules, with dashboards that let departments and donor partners watch progress against targets.

React · Node.js · NestJS · PostgreSQL · Charts

WRB Health tech app.wrb.crossnode.it

Admissions and record management

A national ward record system that replaces paper ward books with structured electronic patient records, so clinical staff work from one accurate source. I implemented the patient admission and record-management modules, role-based clinical access and audit-ready data handling.

React · Node.js · NestJS · MySQL · Docker

Solstice Health Health tech

Review dashboards and workflows

An AI-native platform for life-sciences and biopharma marketing teams that pre-screens content against medical-legal-regulatory requirements, turning a compliance review that took weeks into one that takes minutes. I built the interactive dashboards and the review workflows for evaluation, versioning and collaborative sign-off.

React · Next.js · TypeScript · Node.js · PostgreSQL

GiftXD Fintech and crypto

Trading interface and wallet flows

A marketplace that converts gift cards into cryptocurrency, with a matching engine that surfaces the best available exchange rate. I developed the trading interface, the offer matching screens and the wallet integration flows.

React · Node.js · MongoDB · REST APIs

SnT Global Logistics sntglobal.com

Order tracking and inventory

A single-dashboard logistics product giving clients real-time visibility to view, track and manage inventory and orders across Southeast Asia. I implemented the order-tracking dashboard, the inventory modules and role-based client access.

React · Node.js · Express · MySQL

TECHNICAL SKILLS

Front end	React · Next.js · TypeScript · JavaScript (ES6+) · Redux Toolkit · Zustand · Tailwind CSS · SCSS · Bootstrap · HTML5 · CSS3 · Apryse WebViewer
Back end	Node.js · NestJS · Express · REST APIs · WebSockets · Microservices
Databases	PostgreSQL · MySQL · MongoDB
Cloud and DevOps	AWS · AWS Lambda · Docker · CI/CD
Tools and practice	Git · GitHub · Bitbucket · Jira · Agile / Scrum · Code review · Cursor · Claude Code

WHERE I HAVE WORKED

Fintech and payments — Digital wallets, cross-border transfers, invoicing and billing, gift-card-to-crypto exchange.

Health and life sciences — Electronic ward and patient records, clinical workflow tools, AI-assisted regulatory review for biopharma.

Government — National grant administration and monitoring systems for a European government ministry.

AI and SaaS — Multi-tenant AI content platforms with LLM integrations and subscription access.

Logistics — Inventory, order tracking and client dashboards.

HOW I WORK

Problem solving

I chase a bug across the stack rather than patching the symptom I can see.

Technical communication

I translate between stakeholders and engineers, and write the decision down.

Client focus

Most of my work is for international clients, delivered against their deadlines.

Code review

I review carefully and expect the same, because it is cheaper than the alternative.
